A New Opportunity for Advertising Employment Opportunities for Students at the PSERC Universities

Students from the PSERC universities are excellent candidates for positions in your organization. With degrees in such disciplines as engineering, operations research, economics and computer science, they come well-prepared to make an immediate contribution on-the-job. In addition, due to the involvement of PSERC faculty in the challenges facing the electric power industry, these students bring an unusually high level of knowledge and experience in the electric power business environment. If you aren't already recruiting these students, you should be. And if you are, we would like to help make your advertising more effective.

A place is now available on the PSERC website (<http://www.pserc.wisc.edu/>) for PSERC members to advertise job opportunities for students. This place is the “[Job Opportunities for Students](#)” folder. With this service, position descriptions will be uploaded to the website for viewing and downloading by students. PSERC faculty will also be informed when a position description is uploaded so that they can let students know about the opportunity

How do you take advantage of this service?

Simply email a position description and information on how to reach a contact person in your organization to Dennis Ray at djay@engr.wisc.edu. For more information, call him at 608-265-3808.

**Let your Human Relations Staff know about this additional way
of getting the word out about employment opportunities
in your organization!**
